

Certified Medical Coding

**Don't let your medical coding enter full-code status.
Certified Medical Coding for you and your practice.**

**Do you struggle to
keep up with
coding guidelines?**

**Is the code list on
your superbill or
EMR insufficient?**

**Does the OIG's
attention to E&Ms
make concern you?**

**CIPROMS offers Certified Medical Coding as part of our
full-service medical billing or as a stand-alone option.**

Our certified coders work from paper charts or EMRs, including approved access to hospital systems. After reviewing the medical record and notes, coders then enter CPT-4 and ICD-10 codes, along with other pertinent demographic and provider information, into customized spreadsheets that are then uploaded directly into our practice management system—or yours—with no additional data entry, saving time and creating efficiencies early in the medical billing process. Other services include:

- Coding to the highest level of documentation for maximum reimbursement.
- Compliance with all current coding standards.
- Returned charts to providers when we have a question or need clarification—and gentle reminders when we haven't heard back from you.
- Detailed tracking of down-coded evaluation and management levels resulting from missing documentation.
- Customized clinical documentation improvement training by our CIPROMS coding liaison.
- Increased revenue by carefully capturing all billable services documented in the medical record.

trained staff

Our Indianapolis-based team of coders is experienced in emergency medicine, anesthesia, and hospitalist coding. All coders are certified through AAPC and/or AHIMA.

quality programs

Our team assigns quality codes based on your participation in Medicare's Merit-Based Incentive Payment System and other government and commercial quality programs.

business analytics

Our customized reports track insufficient documentation and reconcile patient charges entered with hospital or physician logs to ensure all services are captured.
